

PRODUCT DATA SHEET

SECURE ROOMS

AMC is able to provide a design, supply and installation service to our clients requiring unique solutions to their security requirements.

Whether for long or short term storage, of cash or high value items, AMC is able to provide suitable solutions against varying levels of attack using our secure walling system.

Rooms are constructed from a special composite panel. This panel, which has been developed with the assistance of cutting tool manufacturers has a confidential construction, however, it comprises several different layers of varying materials developed to minimise the effectiveness of cutting tools such as angle grinders and even thermal lances.

Due to the sensitive and confidential nature of this product, we are unable to provide examples of specific installations, however, for bona fide enquiry, we are able to offer a personalised service to provide the facility you need, to the level of protection you require.

Please contact us for an informal discussion, or to arrange a preliminary meeting.
