

PAYPOINT WINDOWS

AMK30 Deposit Window

A window designed to provide communication and vision between secure and non secure areas that is shotgun and handgun resistant.

The Deposit Window has the added facility of an extending pass tray to enable the periodic transfer of small items to and from the secure area and offers a high level of protection to staff.

The Deposit Window can be used as a security check window and is also an ideal 'partner' to work in conjunction with our Bulk Transfer Unit.

The integral electronic audio system assures clear communications, while the extending tray provides a convenient transfer facility for the delivery of documents, identification cards, keys and other small items up to 260mm x 170mm x 100mm.

The bullet resistant glass screen, electronic speech transfer and interlocked extending tray ensures that no direct threat of attack is possible from outside of the secure area. The extending tray locks flush with the front of the screen to avoid any external projection and resist external attack.

Dimensions: Overall 1016mm high by 540mm wide by 325mm deep
The pass tray is 100mm deep by 260mm wide by 170mm long

Weight: 98kg
