

PRODUCT DATA SHEET

AMP3000 SECURITY BOLLARDS

Design Concept

Designed to enhance any prestigious location, AMP3000 bollards provide reliable operation in highly trafficked locations, such as city centre and car park applications where high volume vehicle control combined with a medium security level are required.

Available in fixed, Semi—Automatic and Fully Automatic variants in heights of 500mm, 600mm and 800mm, thus allowing a suite of complementary bollards to be specified for an entire development.

AMC are able to supply fully linked multiple bollard systems with any type of access control system.

Bollard Features

- Tough and resilient construction, tested over many thousands of cycles in the most demanding and extreme environments.
- Designed to withstand vehicle impact.
- Reliable, silent hydraulic operation.
- Capable of being linked to form a complex access control system.
- Very low maintenance requirements.
- May be programmed to remain up or to retract in the event of a power failure.
- Simple installation and commissioning.
- Optional fittings include a warning light system,
