

PRODUCT DATA SHEET

Alligator Ramp

A clever combination of traffic flow control and speed control in one product.

Alligator Ramps are a modular steel speed ramp with an inbuilt Alligator Teeth direction control device.

A 50mm wide tooth, capable of deflating car and 4X4 tyres is depressed by tyres when vehicles are moving in the approved direction. Large rubber buffers ensures quiet operation, and red “cats eyes” provide night time warning to vehicles moving against the approved flow direction.

Each ramp section is 320mm wide by 690mm long and has a strong Durbar” surface, finished in alternating black/yellow.

Rated for all wheeled vehicles including HGVs, the system is simple to install on to asphalt or concrete using suitable expanding anchor bolts.

Suggested Quantities to Suit Varying Road Widths.	
Road Width	Quantity of Ramp Sections
2.5m	7
3.0m	9
3.6m	10
4.0m	11
4.5m	13
5.0m	15
6.0m	17
7.0m	21
9.0m	27
