

Architectural Features

Our steel trellis range comprises a selection of pre formed welded steel arcs and columns which may be configured to construct decorative features, facades gazebos etc. Specialist structures and features are easily configured, and we are able to work with your design team to produce custom built features to your specification. Steel trellis features allow attractive decorative features and to be added to projects ranging from housing developments, walkways, shopping malls and parks. Pre manufactured trellis sections are simply bolted in place They may also be fixed to walls to produce decorative facades and other architectural features. The galvanised and powder coated finish is long lasting and impervious, allowing plants and greenery to grow along and through the trellis without damage to the structure or the plant life itself.
