

## ENERGY PILLARS

### Design Concept

Energy pillars are manually retractable steel posts fitted with a series of energy distribution points.

They enable mains power, or other services to be distributed to more remote areas which are used for occasional events.

Typical installations include airport aprons, exhibition halls, market squares and showgrounds.

AMC are able to supply units capable of distributing electricity, water, compressed air, and telephone or data connections.

### Bollard Features

- Discreet and stylish design.
- Simple installation and low maintenance requirements.
- Single or multiple bollards may be supplied with access control systems to suit the requirements of any site.
- Available as fully automatic semi-automatic or fixed to allow suited installations at larger sites.
- Finished in Anthracite, Orange or Ivory paint as standard.
