

PRODUCT DATA SHEET

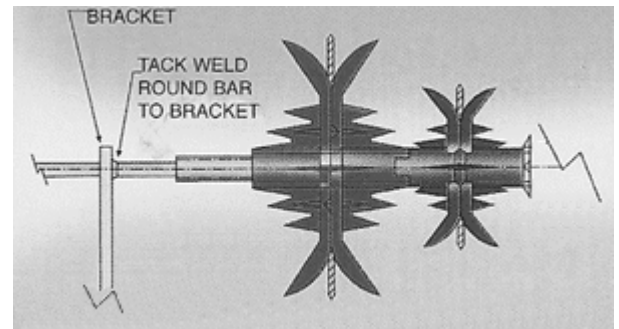

NYLON SECURITY SPINNERS

Nylon spinners are smaller than their aluminium counterparts, and are ideal for locations which require discreet anti climb measures.

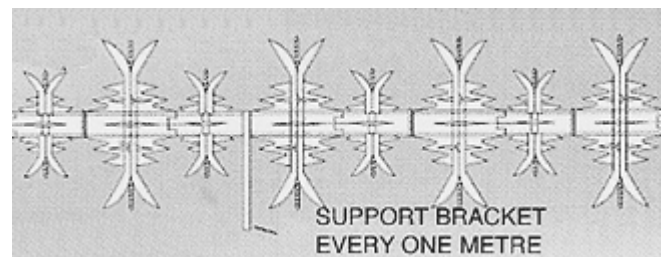

The spinners may be mounted in multiple layers to provide added security as required, at any angle to fences, walls, gates, pylons, lighting towers, masts, aerials etc.

The spinners are manufactured from impact resistant Nylon 6, with embedded twisted steel spikes in each end. They are assembled onto a plastic tube, in alternate large/small assemblies with spacer washers in between. The plastic tube is then mounted onto the steel axle. The axle may either be welded or drilled and pinned to the mounting brackets at 1 metre intervals.

- Made from self coloured Nylon 6 with UV stabilisers and fire retardant properties. Available in red, blue, green, black, brown and grey.
- Cannot be twisted or bent, does not rust, withstands attack, shock and vibration.
- Designed to withstand extreme environments with a projected life span in excess of 10 years.
