

# PRODUCT DATA SHEET

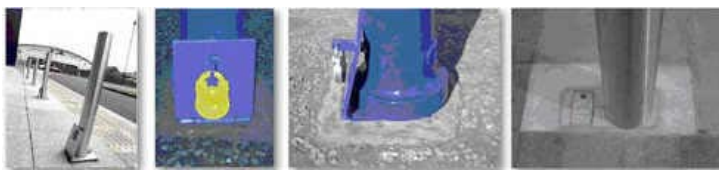

## REMOVABLE BOLLARDS

This range of bollards will simply prevent unauthorised entry of vehicles or restrict access, whilst being completely removable, and is therefore ideal for locations requiring infrequent access or closures.

The bollard is a heavy duty post that locates in a socket embedded into concrete. The post is locked in position by use of a socket flap and a padlock (not supplied).

When the post is removed, the socket flap can be padlocked in closed position keeping the socket free from debris.
