

PRODUCT DATA SHEET

SECUREPARK

Parking spaces are a valuable commodity. There is nothing so infuriating to return to your parking slot, only to find that someone has claimed it as theirs!

AMC's new SecurePark allows you to reserve your car parking space when you are away, and also provides a visual deterrent to thieves when you are safely parked.

The lightweight barrier (7Kg) is simply bolted to a suitable surface, and is ready to protect your space within minutes.

Operation is by means of an integral lock, and the barrier may be locked in the up or down position.

All sections of the unit are galvanised and powder coated mild steel, apart from the key box which is 304 grade stainless steel.

The barrier arm is finished in high visibility orange, whilst the base is black.
