

## SPECIAL PROJECTS

We are able to modify our standard fencing and trellis products to suit specific architectural designs and requirements.

Please contact our sales team to discuss your specific project requirements.

## ACCESSORIES

### High Visibility Posts

For applications which require maximum visibility through the fence line, for example where CCTV surveillance is necessary, we offer our lattice fence post system.

An extremely rigid and strong post with minimum surface area allows visibility even at oblique angles.

### Fence Panel Spikes, and Extensions

An option to the standard fence panel may be specified which features 20mm extensions to the vertical wires, forming integral anti climb spikes. Alternatively, an extension panel is available to form a cranked climb deterrent, which may be fitted with barbed wire or mesh infills (only available on height of 2m and above).

### Decorative Finials

An attractive decorative finish to our standard fence posts is easily accomplished with these post top finials.
