

# Speed Ramps

AMC speed ramps offer a quick and effective traffic control measure; the available 30mm 50mm and 75mm heights reduce traffic speeds to 20mph, 10mph and 5mph respectively. They can be bolted to existing concrete surfaces and are the most cost effective means of enhancing the traffic safety of your site.

- Easily installed bolt down traffic calming ramps
- Made from heavy duty fully recycled PVC
- White reflectors in each section make for good visibility at night and in bad weather
- Ramps and ends are both available in yellow, or black
- The 30mm high ramp slows traffic to 20mph, 50mm ramp slows to 10mph and the 75mm ramp slows traffic to 5mph
- Each inner segment is 420mm wide and 500mm long
- Each ramp (except the 30mm) connects to the next using the O327 speed ramp connector
- They can withstand 40 tonne HGV's

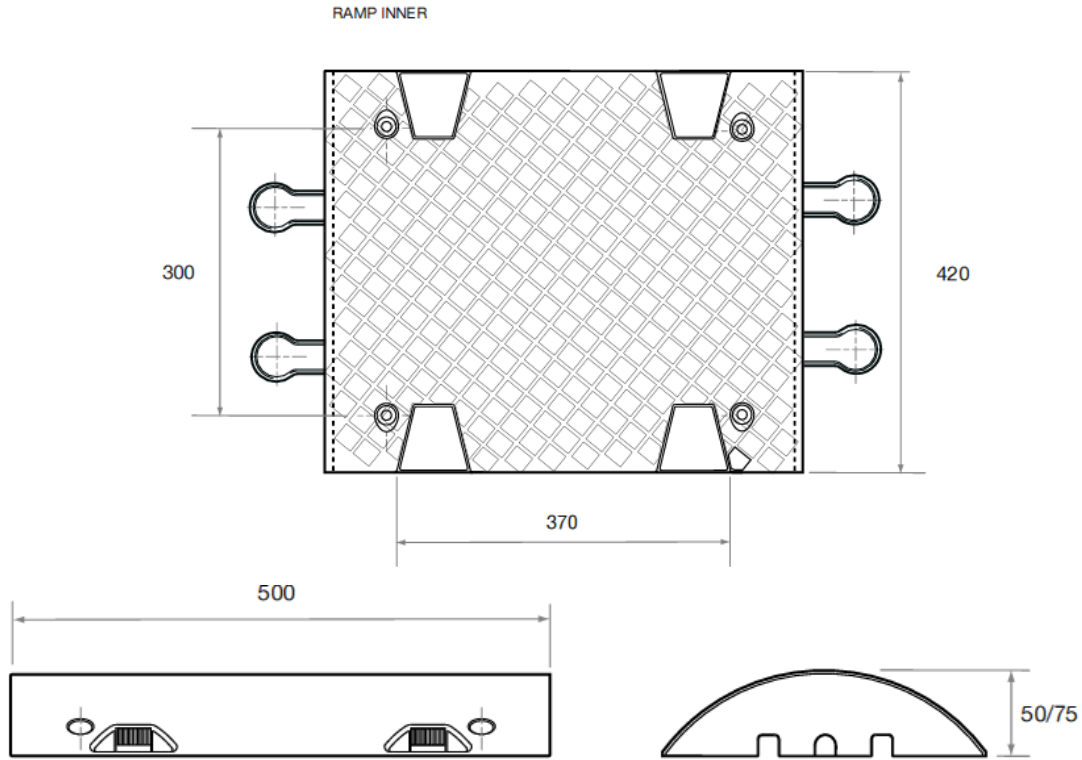

Designed to be installed on good condition concrete or asphalt surfaces that are at least 100mm deep
