## SWING GATES—Single and Double

AMC swing gates are designed with ease of specification and installation as important factors.

Gates are designed to eliminate specification issues and potential installation problems at site. The swing gates are bi-directional so that they can be installed in any configuration. It is even possible to reverse the direction of operation after installation.

Constructed from steel with mesh or vertical bar infill, all gates are supplied complete with a lever handle, Euro cylinder lock and a tamper proof drop bolt system.

Standard gates are available in single and double leaf styles up to 6m in width and 2.2m in height. Larger gates are available as special build units. We also offer automation and access control systems to suit your individual requirements.

### Features:

- Tough steel construction with steel mesh or vertical bar infill for optimum security.
- Heavy duty hinge and locking mechanisms as standard.
- May be adjusted or re-hung after installation.
- Low maintenance powder coated finish.
- Automation and access control systems are supplied if required.
