

## TYRE KILLER BARRIER

Tyre killer barriers are designed for use in high security high traffic applications.

They are a simple to install highly secure vehicle control barrier, ideally suited for approach entrances to banks, military installations, airports, docks, cash collection depots, government offices etc.

As the barrier raises, the tyre killer teeth retract below ground level, providing safe access for authorised vehicles. When the vehicle has passed, the barrier lowers and the teeth return to the active position, ensuring total protection from unauthorised vehicle intrusion.

Tyre killer barriers may be used with any type of access control system, and the use of an underground detector loop acts as a safety device to prevent the barrier operating when an authorised vehicle is stationary over the teeth.

### Features:

- Full electrical isolation and overload protection.

- Manual operation facility with safety interlock.

- Single drive motor for both barrier and teeth.

- Boom arm rise time, 2 to 5 seconds.

- Boom arm length: 3 to 6 metres.

Traffic light system, folding aluminium skirt and STOP sign are supplied as standard.

Fully galvanised and powder coated construction to provide maximum protection in extreme environments.

Folding arm kit available for sites with headroom restrictions.
