

PRODUCT DATA SHEET

HOOP BARRIERS

Static hoop barriers can be located strategically on garage forecourt developments and perimeters to form a physical deterrent to potential ram-raiders or configured in numerous other applications such as trolley bays etc.

AMC steel hoops come in a variety of finishes from plain galvanized, painted and stainless steel.

All hoop designs can be supplied as a 'root fix' format to be simply 'concreted in' or alternatively have a base plate detail on each leg for applications where a 'bolt down' fix is preferable.

Specifications:-

Available in standard 48 mm , 60mm, 76 mm and 90 mm diameter, CHS steel section, in various wall thickness.

Overall length and height of units to customers own requirement.

Galvanized to BSEN ISO 1461 (1999) as standard. Available finished to specific RAL or B.S Polyester and Nylon coatings.

Removable versions mean access can also be granted when required as the hoop simply locates into a pair of host ground sockets. Integral lock removable only available in 60 or 76 diameter.

Fixing lugs can also be specified to allow signage boards to be attached to the inside of the hoop for on site advertising.
