

PRODUCT DATA SHEET

PALISADE FENCING

Palisade fencing is a traditional steel security fencing system which is largely being superseded by the welded steel mesh fencing such as R65 or Paladin types. However, Palisade continues to be popular in certain environments, and AMC palisade is a flexible system suited to any application..

Our system is supplied in kit form for simple on site assembly by the customer, or AMC. The pales may be specified as either rounded or triple pointed, and either galvanised or polyester powder coated in any RAL colour.

A range of single and double leaf gates is also available.

Specification:

Pales: 2mm gauge mild steel, W section with either rounded and notched or triple pointed tops. 17 pales per 2.75m wide panel.

Posts: 102mm by 44mm by 7.5kg/m RSJ. Post centres 2.75m.

Horizontal Rails: 50mm by 50mm by 6mm RSA

Fixings: M12 cup square bolts, and M8 galvanised T head bolt to pales. Both with Permacone type security nuts. Rail to post fixing by steel fishplates.

Finish: Galvanised to BS EN ISO1461, optional polyester powder coating to any standard RAL colour.

Heights available: 1.8m, 2.0m, 2.1m, 2.4m, 3.0m, and 3.6m.
